

Installation

CRM/ERP Platform Documentation

Installation Guide

Prerequisites

Requirement	Version	Notes
Node.js	20+	Use nvm or fnm to manage versions
npm	10+	Comes with Node.js
MySQL	8.0+	XAMPP, Docker, or native install
Redis	7+	Required for BullMQ job queues
Git	any	

Windows with XAMPP: MySQL is available via XAMPP Control Panel. Redis can be run with `wsl redis-server` or a Windows Redis build from <https://github.com/tporadowski/redis/releases>.

Step 1 — Clone the Repository

```
git clone <repo-url> CRM
cd CRM
```

Step 2 — Backend Setup

```
cd backend
npm install
```

Create the database

```
-- In MySQL (via phpMyAdmin or mysql CLI):
CREATE DATABASE enterprise_crm CHARACTER SET utf8mb4 COLLATE utf8mb4_unicode_ci;
```

Configure environment

```
cp .env.example .env # if example exists, otherwise create manually
```

Edit `backend/.env` :

```
DATABASE_URL="mysql://root:@127.0.0.1:3306/enterprise_crm"
JWT_SECRET="change-me-in-production"
JWT_REFRESH_SECRET="change-this-too"
REDIS_URL="redis://localhost:6379"
FRONTEND_URL="http://localhost:3000"
PORT=4000
NODE_ENV=development

# Optional – required only for OCR feature
ANTHROPIC_API_KEY=sk-ant-api03-...

# Optional – required only for Google Calendar sync
GOOGLE_CLIENT_ID=...
GOOGLE_CLIENT_SECRET=...
GOOGLE_REDIRECT_URI=http://localhost:4000/api/v1/calendar-sync/auth/callback
```

Run migrations

```
npx prisma migrate deploy
npx prisma generate
```

Start the backend

```
npm run start:dev
```

Backend is now running on <http://localhost:4000>. Swagger docs at <http://localhost:4000/api/docs>.

Step 3 — Frontend Setup

```
cd ../mycrm
npm install
```

Configure environment

Create `mycrm/.env.local` :

```
NEXT_PUBLIC_API_URL=http://localhost:3000
ANTHROPIC_API_KEY=sk-ant-api03-...
```

The `ANTHROPIC_API_KEY` in `.env.local` is for any frontend-side Claude calls. The main OCR feature uses the backend key.

Start the frontend

```
npm run dev
```

Frontend is now running on <http://localhost:3000>.

Step 4 — First Launch

1. Open <http://localhost:3000>
 2. You'll be redirected to the registration page
 3. Create the first user — this user becomes **SUPER_ADMIN**
 4. The organization is auto-created during registration
-

Verifying the Installation

```
# Backend health
curl http://localhost:4000/api/v1/auth/check-email -d '{"email":"test@test.com"}' -H "Content-Type: application/json"
# Should return { "exists": false }

# Frontend
open http://localhost:3000
# Should show the login page
```

Troubleshooting Installation

P1001: Can't reach database server

- Ensure MySQL is running (XAMPP → MySQL → Start)
- Check the port in `DATABASE_URL` (default 3306)

Redis connection refused

- Start Redis: `redis-server` (Linux/Mac) or via WSL on Windows
- If Redis isn't available, BullMQ jobs will queue up but not execute

prisma generate fails

- Run from inside `backend/` directory
- Ensure `backend/node_modules` is installed

Port conflicts

- Change `PORT=4001` in `backend/.env` and update the proxy in `mycrm/next.config.ts`
