```

Naming Conventions

Pattern	Example
NestJS module folder	<code>kebab-case/</code>
Controller	<code>feature.controller.ts</code>
Service	<code>feature.service.ts</code>
Module	<code>feature.module.ts</code>
Next.js page	<code>page.tsx</code> inside route folder
Zustand store	<code>feature.store.ts</code>
Shared components	<code>components/feature/ComponentName.tsx</code>

Environment Files

File	Purpose
<code>backend/.env</code>	NestJS reads this at startup
<code>mycrm/.env.local</code>	Next.js reads at build/runtime

Never commit either file. See [Configuration.md](#) for all variables.
